

Delftsians

We are a team of curious and motivated students from TU Delft, willing to apply our skills and knowledge to create real measurable impact.

Vladimirs Kirills Bickovs

GPA: 8.8

Proactive Honours student interested in both theoretical research and practical implementation. Data Quality Engineer in Bunq – a leading fintech bank. Researching Reinforcement Learning for the Vehicle Routing Problem. Lead organizer of the Latvian Olympiad in AI. Founder of Lemon AI, advancing AI education in Latvia and globally.

Egor Georgievskii

GPA: 9.4

Ambitious Honours student at TU Delft, driven by Algorithms and Machine learning. IOI Medalist. Data Quality Engineer at bunq, building AI-driven automation. Honours research project on predicting ML learning dynamics.

Fiodar Prystauka

GPA: 8.8

Versatile student at TU Delft, enthusiastic about Algorithms, Machine Learning and everything in between. Working on an ML-based Radar Image Processing Project as part of Honours. IOAI Awardee and Coach.

Ioannis Pantidis

GPA: 9.4

Honours student at TU Delft with a strong interest in algorithms, machine learning, and building high-impact software. I have experience as a Data Analyst at the Port of Rotterdam and am the creator of a popular open-source project referenced by Google DeepMind.

Bartłomiej Nowak

GPA: 8.9

Honours student at TU Delft, passionate about machine learning, data science, and combinatorial optimization. Skills refined on projects ranging from Tetris in x86-64 assembly to training complex AI agents. Currently researching Generalized Reinforcement Learning Algorithms for Job Scheduling Problems.
